MEMORANDUM FOR : Deputy Director (Research)

SUBJECT : Procurement of Single Sideband Capability

1. This memorandum contains a recommendation for your approval. Such recommendation is contained in paragraph 4.

2. There is an operational requirement to provide a single sideband capability at [] which will permit two-way communications between ground and the mission aircraft at any time during an operational sortie. Attached is a list of representative equipment with prices totaling [] which will fulfill this requirement. Twenty percent reduction of above costs will be available on government procurement; however, such savings will be employed to meet installation costs and services of one engineer for a period of approximately one week.

3. The referenced equipment is not a "minimum" capability, but is intended to provide a capability for meeting all operational requirements at [] (both present and future) which can be anticipated by the Communications Staff. Transmitter power has been established as [] which should assure reliable communications even under adverse propagation conditions. To ensure uninterrupted reception of signals, a back-up receiver has been included in the list of equipment. This extra receiver will not only function as a spare, if needed, but will permit the monitoring of two separate radio frequencies by the base station during those periods when the signal may be ambiguous. The equipment itself will be mounted in a console, providing maximum efficiency and convenience for the station operator.

4. It is requested that you approve the expenditure of [] for the procurement, installation and engineer services required to obtain single sideband capability at []
